

# Leaf-free Streets *For Clean Waters*

Did you know that leaves left in the street every fall can harm our waters?

When it rains water runs through street leaves forming a "leaf tea" rich in phosphorus that drains to our lakes and rivers through storm sewers. Phosphorus can fuel toxic algae blooms harmful to animals and people.

- More than 50% of the annual amount of phosphorus in urban stormwater can come from leaves in the street.
- In the fall, timely removal of street leaf litter can reduce the amount of phosphorus in urban stormwater by 80% compared to no leaf removal.

Communities across Dane County are working hard to protect our waters, but they can't do it alone.

*Join us in keeping streets  
leaf-free this fall.*

## It's easy! Before the rain...

1. Safely remove leaves from the street in front of your home.
2. Follow your community's leaf collection guidelines or recycle leaves on your property.

### Sign up for **Leaf-free Streets** **Rain Alerts** this fall!

Alerts will be sent (via text or email) 1-2 days before a rain event reminding you when it's time to remove street leaves.
